# **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

# IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

#### **DETAILED ACTION**

- 1. This communication is in response to Applicant's Amendment to Office Action dated March 9, 2004, mailed June 14, 2004 and received by PTO June 17, 2004, as well as Applicant's Supplemental Amendment Faxed July 19, 2004.
- 1-1. Claims 2-4 and 8-21 are pending.
- 1-2. Claims 2-4 and 8-21 have been examined and allowed.

### Interview Summary

- 2. While reviewing Applicant's Amendment dated June 17, 2004, the Examiner located the following problems:
  - (1) The amended claim 1 covered the same subject matter as the amended claims 2.
- (2) The amended claims 5-7 covered the same subject matter as the amended claims 8 and 11-12.
  - (3) The amended claims 8 and 13 comprised informalities.

On July 19, 2004, the Examiner telephoned Mr. James H. Morris (Reg. No.: 34,681) to discuss these problems. In response to the telephone conversation, Applicant submitted the Supplemental Amendment on July 19, 2004, canceled claims 1 and 5-7, and amended claims 8 and 13.

## Reasons for Allowance

3. The following is an Examiner's statement of reasons for allowance:

Application/Control Number: 09/477,790

Art Unit: 2128

- **3-1.** The closest prior art of record discloses:
- (1) A neural network model for a reverse modeling process (Vai et al., "Qualitatively Modeling Heterojunction Bipolar Transistors for Optimization: a Network Approach");
- (2) A bi-directional neural network for reverse modeling (Wu et al., "A Massively Parallel Reverse Modeling Approach for Semiconductor Devices and Circuits"); and
- (3) A system and method for representing physical environment (Barrett et al., U.S. Patent 6,134,512).
- 3-2. Independent claim 2 is directed at a method of synthesizing a reverse model of a finite state machine as shown in Fig. 3. This independent claim identifies the distinct combination of features of "transforming a transition function of a state machine model of said finite state machine into a constraint on the reverse model, wherein the reverse model is a reverse model of the state machine model" and "applying a parameterization of said constraint to all transitions of the reverse model", which has not been uncovered in a single teaching, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim. Claim 2 is deemed allowable.

Dependent claims 3-4 are allowable as they depend on the allowed independent claim 2.

3-3. Independent claim 8 is directed at a method of calculating a post-image in a finite state machine as shown in Fig. 2 and Fig. 3. This independent claim identifies the distinct combination of features of "forming a reverse model of said finite state machine, wherein the reverse model is a reverse model of a state machine model of the finite state machine" and "calculating a pre-image in said reverse model, wherein the pre-image in said reverse model is equivalent to the post-image in said finite state machine", which has not been uncovered in a

Application/Control Number: 09/477,790

Art Unit: 2128

single teaching, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim. Claim 8 is deemed allowable.

Dependent claims 9-12 are allowable as they depend on the allowed independent claim 8.

3-4. Independent claim 13 is directed at a device for synthesizing a reverse model of a finite state machine as shown in Fig. 2. This independent claim identifies the distinct combination of features of "a logical device for transforming said transition functions of the state machine model of said finite state machine into constraints on said reverse model, wherein the reverse model is a reverse model of the state machine model" and "a parameterization processor for applying a parameterization of said constraints to said estimate of transition functions of said reverse model to form transition functions of said reverse model", which has not been uncovered in a single teaching by others, nor would a modification of prior art references be obvious to one of ordinary skill in the art to yield these limitations in the context of the claim. Claim 13 is deemed allowable.

Dependent claims 16 and 18-19 are allowable as they depend on the allowed independent claim 13.

3-5. Independent claim 14 is directed at a device for calculating a post-image in a finite state machine as shown in Fig. 2. This independent claim identifies the distinct feature, "a forming device substituting the state variables of the reverse model by the transition functions of the reverse model to provide a new set of states representing the pre-image of said reverse model, and thus provide the post-image in said finite state machine", which has not been uncovered in a single teaching by others, nor would a modification of prior art references be obvious to one of

Art Unit: 2128

ordinary skill in the art to yield this limitation in the context of the claim. Claim 14 is deemed allowable.

Dependent claims 15, 17, and 20-21 are allowable as they depend on the allowed independent claim 14.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

#### **Conclusion**

5. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Herng-der Day whose telephone number is (703) 305-5269. The Examiner can normally be reached on 9:00 - 17:30.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, Jean Homere can be reached on (703) 308-6647. The fax phone numbers for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.

Herng-der Day H.D. July 20, 2004
